SUMMARY

Backend engineer with experience building production-ready systems using Python and FastAPI — from blockchain-integrated document platforms to AI-powered applications built with LangChain, LangGraph, and Retrieval-Augmented Generation (RAG). Experienced in API design, database modeling, authentication, deployment, and production support with a strong focus on scalable software engineering.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, SQL, Solidity
- **Backend:** FastAPI, Flask, Node.js, REST APIs, JWT Authentication, Multi-Tenant Architecture
- **AI & Agentic Systems:** LangChain, LangGraph, RAG, Google Gemini, MCP, VectorDB, ChromaDB, Prompt Engineering, OCR (PaddleOCR), Chatbots
- **Databases:** PostgreSQL, OracleSQL, MySQL, MongoDB (ORM - SQLAlchemy)
- **Cloud & Tools:** Docker, AWS (SageMaker), GCP, Azure, Git, Linux
- **Mobile Development:** React Native, Expo

PROFESSIONAL EXPERIENCE

Software Engineer

Nevaluer Technologies Pvt. Ltd. | Feb 2023 — Present | Salem, Tamil Nadu, India

- Developed and optimized backend systems using Python (FastAPI).
- Designed and implemented REST APIs to support scalable applications.
- Built backend pipelines for OCR model training using PaddleOCR.
- Used AWS SageMaker, GCP, and Azure for AI/ML model development, training, and deployment.
- Contributed to TurboDocket by building React-based UI components and backend APIs, and writing Solidity smart contracts for secure, blockchain-integrated document management workflows.
- Contributed to mobile application development using React Native.
- Designed chatbot solutions and automated customer support systems.
- Managed and optimized SQL databases and integrated MongoDB into backend applications.
- Built multi-tenant applications with role-based access control and organization-level workflows.

Cardamom — PVC ID Card Design & Printing Platform

Python | FastAPI | PostgreSQL

- Own backend architecture for a multi-tenant ID card platform covering employee, student, and organization workflows, template management, and role-based access control.
- Designed the relational schema and REST APIs from the ground up and optimized query performance for card issuance and print-job handling.

TurboDocket — Blockchain Document Storage & Access Management

Python | FastAPI | Solidity | Ethereum

- Built backend services integrating Ethereum smart contracts with FastAPI, syncing on-chain events with application state for tamper-resistant document access.
- Designed permission and document-sharing workflows spanning both blockchain and relational database layers.

Aagaram Food App

Python | FastAPI | React Native | Expo

- Developed backend APIs for food ordering, customer management, and React Native (Expo) integration.
- Implemented authentication, business logic, database operations, and supported deployment and production maintenance.

Snug Drive — Road Quality Monitoring

Python | React Native | Expo

- Built a road quality monitoring mobile app using Expo (React Native) with a Python backend.
- Implemented sensor-based vibration analysis for pothole detection.

PROJECTS

EvidenceLens AI — AI-Assisted Startup Due Diligence Platform
Python | FastAPI | React | TypeScript | LangGraph | OpenAI | PostgreSQL

- Built and deployed a full-stack platform that analyzes startup pitch decks (PDF), extracts claims, maps supporting evidence, and generates structured reports for human review.
- Designed a LangGraph workflow for AI-driven claim extraction, evidence-support assessment, uncertainty highlighting, and provenance tracking, with user authentication and per-project ownership.
- Containerized with Docker and Alembic migrations; backend deployed on Render and React frontend on Vercel.

  Live Demo: https://evidencelens-ai.vercel.app/
  GitHub: https://github.com/Abusalman-alhaj/evidencelens-ai

AI-First CRM HCP Interaction System
Python | FastAPI | React | LangGraph | PostgreSQL | Groq LLM

- Built an AI-first CRM system enabling HCP interaction logging through a conversational AI assistant.
- Developed a LangGraph agent with five tools: Log Interaction, Edit Interaction, Generate Summary, Suggest Next Action, and Follow-up Reminder.
- Integrated a Groq LLM for intent detection and structured data extraction with automatic updates to a read-only React UI.

  GitHub: https://github.com/Abusalman-alhaj/ai-first-crm-hcp

Twinle — Smart Contact Management App (Published on Google Play)
React Native | Android

- Designed and shipped an Android app end-to-end — UI, backend integration, and release — published and live on Google Play.
- Built intelligent contact organization and social-media profile integration features.

  Google Play: https://play.google.com/store/apps/details?id=com.twinle.app&hl=en_IN

HireMe API — Job Application Management System
Python | FastAPI | SQLAlchemy | Docker

- Built a production-ready backend with JWT authentication, role-based access control, and SQLAlchemy ORM models.
- Integrated TiDB Cloud over secured SSL connections; containerized with Docker and deployed on Render.

  Live API Docs: https://hireme-75o8.onrender.com/docs

EDUCATION

Bachelor of Engineering — Aeronautical Engineering
Mohamed Sathak Engineering College, Anna University | 2017 — 2021

CERTIFICATIONS

- Python Programming Certification — Computer Science Corporation (CSC)
